

## Apple, Pears or Apples and Pears Riddle

There are three baskets with fruits. Each of them can contains apples, pears or apples and pears combined. All baskets have a label with their content, but all of the labels are wrong. A merchant tells us a correct type of fruit (apple or pear) that is in a certain basket. What is the true content in every basket? Correct the labels.

### Program Description

In this twist of the famous riddle we create a simple program that:

Section 1: Insert Data	1. Receive information for the false labels. 2. Return information about the correct type of fruit in a certain basket. 3. Receive answers.
Section 2: Solution	4. Find the correct answer.
Section 3: Display results in dynamic way	5. Compare results. 6. If answer is not the correct one we can take another input. 7. Display the wright answer as a drawing of the baskets with their true content.
